Cyber Safety Practices.

I will Apply as a Student

DIPLOMA IN ICT | ICT FOUNDATIONS ASSIGNMENT

STUDENT NAME : H.A.H. CHETHIKA NINNADI

STUDENT ID : PSBUC/DIP/ICT/SL/26/LC/0003

My Password Strategy

- Length over complexity: Using long "Passphrases" (e.g., GreenTreeSky#21) instead of short, complex passwords.
- Password Manager: Using tools like Bitwarden or Google Password Manager to store passwords for all accounts securely.
- 2-Factor Authentication (2FA): Enhancing security by using a code (OTP) sent to your phone when logging into email and LMS accounts.

Identifying Phishing Attacks

- Verify Sender: Checking the sender's domain (e.g., checking if it's from @https://www.google.com/search?q=luxway.com or a generic @gmail.com) to ensure it's legitimate.
- Hover over links: Hovering your mouse over a link before clicking to verify the actual web address (URL) it leads to.
- No Credentials: Never providing sensitive information or login details through links received in an email.

Safe Habits & Backups

- The 3-2-1 Rule: Keeping 3 copies of your data, stored on 2 different media types (e.g., Pen drive/Cloud), and having 1 copy kept off-site.
- Official Sources: Always using official websites only when downloading software or applications.
- Safe Downloads: Avoiding the download of "crack files" or software from unknown or untrusted websites

My Digital Safety Roadmap

- Social Media Privacy: Checking and securing the privacy settings on all my social media accounts today.
- Updates: Updating my computer's Windows and Browser every month to ensure the latest security patches.
- Public Wi-Fi: Using a VPN to protect my data whenever I connect to public Wi-Fi networks
